8.Experiment: User Management & RBAC in Zoho Creator

Aim :

To configure granular User Management and Role-Based Access Control (RBAC) within a Zoho Creator application to secure modules, restrict data visibility, and assign designated operational roles.

Workflow:

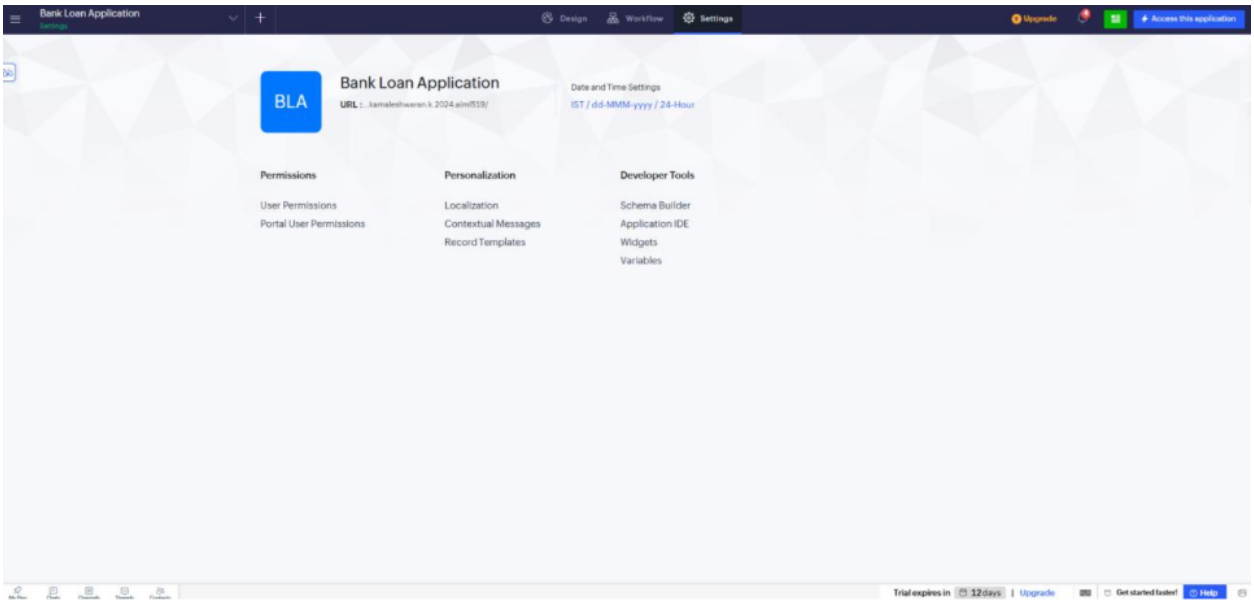

Role-Based Access Control restricts system access based on the organizational role of a user. In this lab, we configure an enterprise application in Zoho Creator featuring three distinct user tiers:

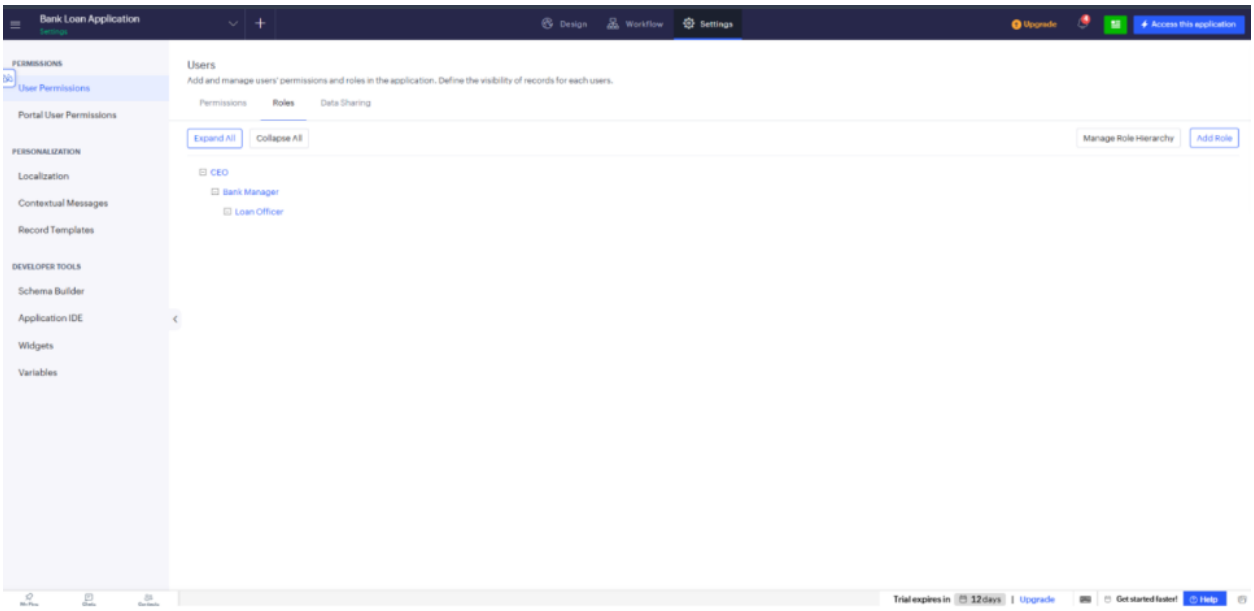

Role Name	Assigned Permissions	Data Access Scope
Administrator	Full Create, Read, Update, Delete (CRUD)	All records across organization
Manager	Read, Update, Approve Records	Assigned Region / Department records
Standard Employee	Create & Read own submissions	Only self-created records

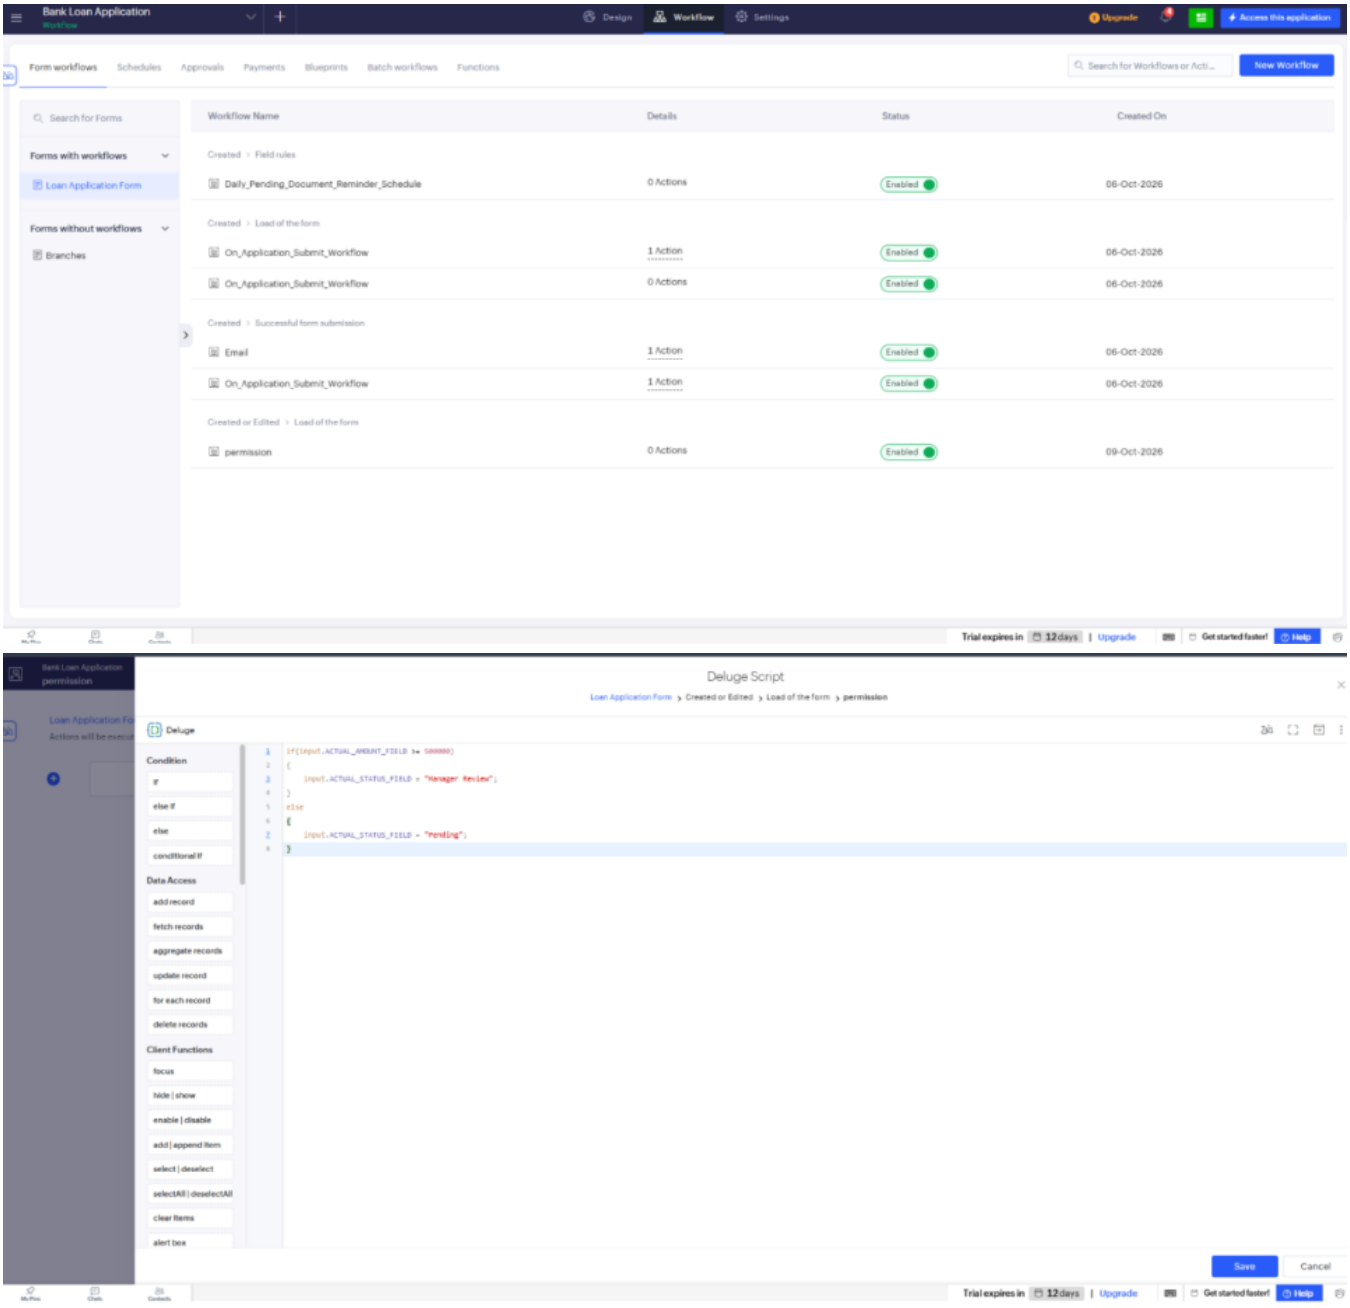

Procedure:

1. **Access Developer Mode:** Log into Zoho Creator, open your target application, and navigate to the *Settings* tab in the left-hand builder menu.
2. **Configure Users & Roles:** Click on **Users & Permissions** under the Users section. Select the *Roles* sub-tab and create custom roles (e.g., Manager, Employee) alongside the default Administrator role. Establish hierarchy reporting lines if required.
3. **Define Profiles & Permissions:** Navigate to **Profiles** to fine-tune module-level permissions (Form creation, Report viewing, Edit/Delete rights).

Screenshots:

Result:

User management and RBAC rules were successfully configured and tested in Zoho Creator, ensuring robust application security, data isolation, and structured multi-user workflow execution.
